

VaporNet Gateway™

AI-Powered Intelligent Network Gateway

“

"The backbone of the intelligent mesh revolution"

Product Overview

VaporNet Gateway represents the pinnacle of AI-driven network infrastructure, delivering unparalleled security, performance, and autonomous operation capabilities for enterprise and Web3 environments. This high-performance, cloud-managed gateway device stands as the central nervous system of your next-generation network architecture.

Key Features

Quantum-Ready Security

- Post-quantum cryptographic algorithms
- Zero-trust architecture with continuous identity verification
- Real-time threat intelligence with autonomous response
- Military-grade encryption with forward secrecy protocols

AI-Powered Traffic Optimization

- Predictive bandwidth allocation using proprietary ML algorithms
- Self-learning traffic patterns for preemptive congestion management
- Autonomous QoS adjustments based on application criticality
- Edge AI processing for sub-millisecond routing decisions

Cloud-Native Architecture

- Seamless integration with major cloud providers
- Infrastructure-as-code deployment capabilities
- API-first design for programmatic control
- Containerized microservices for modular functionality

Sustainable Operations

- Energy-efficient processing reduces carbon footprint by 47%
- Smart power management with idle-state optimization
- Carbon-neutral manufacturing and supply chain
- 85% recyclable components with biodegradable packaging

Technical Specifications

| Feature | Specification |
|-------------------------|--|
| Processing | 8-core ARM Cortex-A78 @ 2.8GHz |
| Memory | 16GB LPDDR5 RAM |
| Storage | 256GB NVMe SSD |
| Network Interfaces | 8x 10GbE / 4x 25GbE / 2x 100GbE |
| Encryption Acceleration | Dedicated quantum-resistant crypto core |
| Power Consumption | 35W typical, 65W max |
| Dimensions | 320mm × 220mm × 44mm (1U) |
| Compliance | EU AI Act, GDPR, SOC2 Type II, NIST 800-53 |

Deployment Scenarios

Enterprise Mesh Backhaul

Serve as the intelligent core of enterprise-grade mesh networks, providing seamless connectivity between disparate network segments with automated traffic prioritization and security policy enforcement.

Multi-Cloud Bridge

Create secure, high-performance bridges between private infrastructure and multiple cloud providers, with intelligent workload distribution and unified security posture management.

Edge Computing Gateway

Power edge computing initiatives with local AI processing capabilities, reducing latency and enabling autonomous decision-making at the network edge.

Web3 Infrastructure

Provide the security and performance foundation for decentralized applications and blockchain infrastructure with specialized protocol support and enhanced cryptographic capabilities.

ROI Impact

- 43% reduction in network-related security incidents
- 67% decrease in manual intervention for traffic management
- 29% improvement in overall network performance
- 52% reduction in operational expenses through autonomous management

Compliance & Certification

- EU AI Act Compliant
- SOC2 Type II Certified
- ISO 27001 Certified

- Carbon Neutral Certified
- GDPR Compliant
